

It's time for Cersaie, again!

Ceramica Globo exhibits at Cersaie (Bologna, 25-29 September) at hall 21, booth A87-B86, project by Domenico Orefice Design. Between the novelties that are going to be presented, the new models of the most famous collections as T-Edge, Display, Stockholm and Incantho; furthermore the new shower tray Doccia Pietra and many other solutions that mix technology and special features.

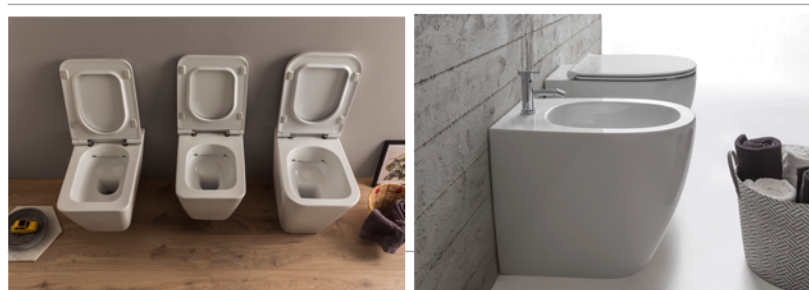

T-Edge new solutions with the new patented mixture Globothin®

Following the excellent market feedback, Globo has added more combinations and models to its T-Edge Collection, designed by CreativeLab+ for Globo and previewed at the previous edition of Cersaie. The real peculiarity of the T-Edge collection, available in the 14 Bagno di Colore ceramic shades, are the super slim edges – 6 mm thick – made possible by the new patented GLOBOTHIN® ceramic mixture, which guarantees reduced thickness along with greater strength and shine.

Le Pietre: new materic finishes

The Le Pietre collection includes now a Carrara marble finish, in addition to the existing textural finishes of grey Peperino and Travertine, for a refined and elegant look. Research and innovation team up to develop an ever-evolving product range and to offer aesthetically pleasing and functional solutions.

New solutions: Senzabrida® and Multi 2.0

Now available BIM files

The company developed the innovative Multi 2.0 in response to the needs of market needs and installers requests. Now available in the Stone product lines, Senzabrida transforms the drain by concentrating the outflow of water in a single point, thus eliminating the need for a separate cleaning. Ideal for renovation projects, Multi 2.0 system enables the replacement of sanitary fixtures and permits a greater margin of adjustment during installations.

BIM files available on Ceramica Globo website

The BIM files, the most complete format for the planning of residential and contract projects, mainly used from architectural and engineering firms, are now available on company's website. The files, which contain both technical information and 3D technical draws, are available inside collection's pages, with dxf files and instruction for installation.

Easy Detach The quick-release hinge system

The new quick-release hinges allow unhooking the seat with a quick and easy gesture thanks to the special hinges. In fact, the toilet seat can be easily unhinged by pulling the seat upwards. Put the two hinges back on the posts and push to lock back into place. This system allows speeding up the assembly and disassembly of the toilet seat, making it easier to clean it and the surrounding areas which are often difficult to clean.
